

PCOSnil reduces the insulin resistance in peripheral tissues

PCOSnil
Celebrate Ovulation

thereby

Regulates the increased pulse frequency of GnRh release

thereby

Controls the increased LH secretion

thereby

Improves FSH secretion

thereby

Controls excessive testosterone secretion

Improved folliculogenesis in ovaries

Proper stimulation of ovaries

Controlled anabolic activity of testosterone

Controlled androgenic activity of testosterone

PCOSnil induces proper ovulation

Proper secretion of 17-β estradiol

PCOSnil controls weight gain

PCOSnil controls virilizing effect

Proper formation of corpus luteum

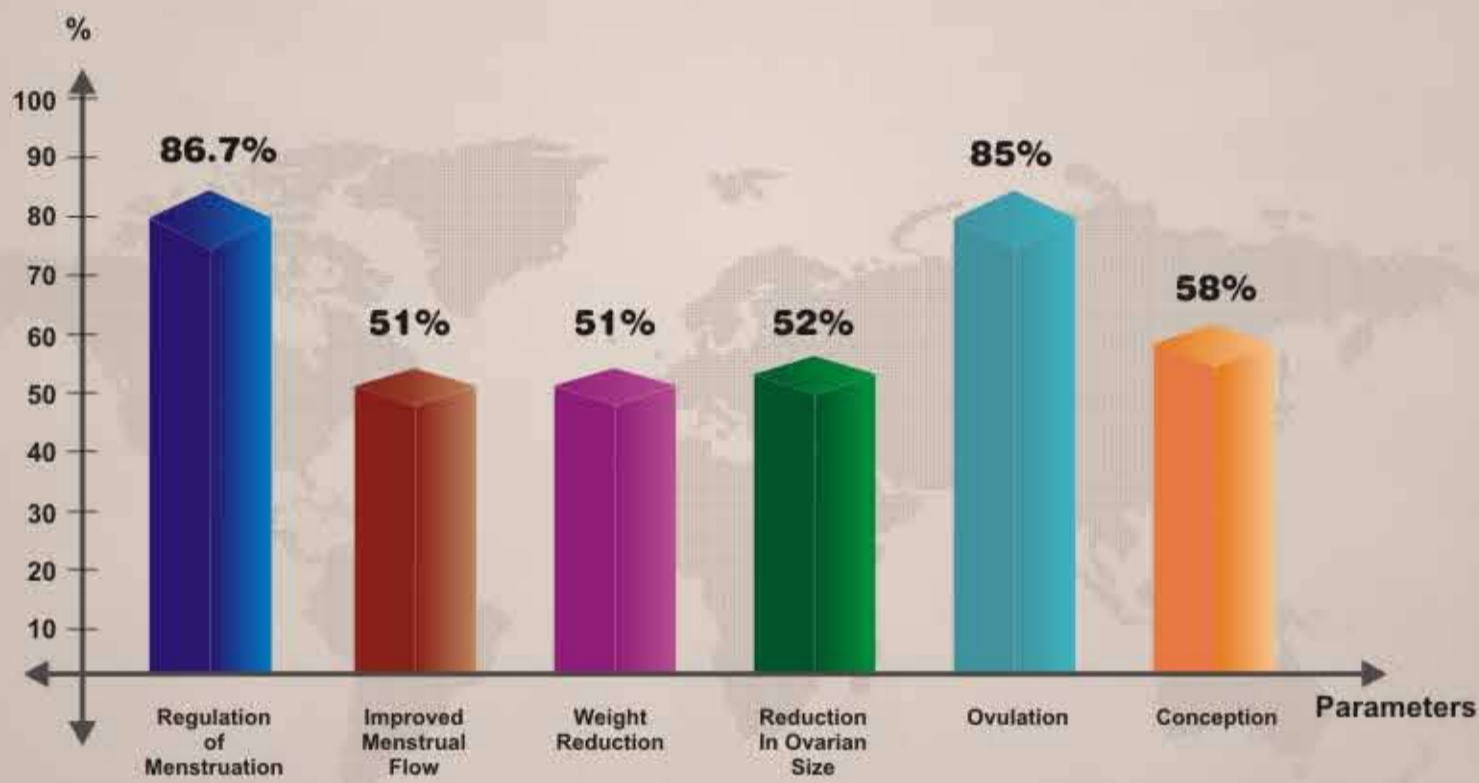

Proper proliferative changes in endometrium

Proper progesterone secretion & secretory changes in endometrium

PCOSnil improves menstrual flow

PCOSnil Post - Marketing Survey Report

• Total No. of Patients - More than 1500 • Total No. of Doctors Involved - 53 • Duration - 6 Months

Dosage : For weight above 50kg - 2 Tabs. twice daily for 6 months.
For weight below 50kg - 1 Tab. twice daily for 6 months.
